

Absolute Value Forecasting and Replenishment

Absolute Value helps distributors by providing a complete forecasting and replenishment solution with ERP independence. The software can plug into an existing distribution

system or legacy system without the pain, complexity, and cost of purchasing a new ERP system. Absolute Value has forecasting and replenishment capabilities in a single package, which is a clear advantage if comparing apples-to-apples because not all forecasting solutions have replenishment capabilities.

Vertical Markets: Industrial and Wholesale Distribution including Consumer Packaged Goods; Electronics; Fasteners; Pump, Valves, and Fittings; and Food.

Functional Highlights:

Absolute Value provides suggested orders daily, by vendor, as a result of its best fit formula-based forecasting and multi-location replenishment. The solution offers drill down capability to every calculation. Exceptional visibility is provided at the forecast, summary rollup, branch location, collaborative forecast, promotions, and suggested order levels.

Technology:

Operating System: Windows

Database: database independent

Presentation: GUI

Delivery: Subscription-based Software as a Service (SaaS)

Technology Highlights:

Software as a Service means that no IT infrastructure is required for full productive use of the software, a low upfront investment, and no long-term commitment. On the hosted SaaS model, the client pays on a subscription basis and benefits from ongoing access to Absolute Value's most current software, upgrades, enhancements, and major releases at no additional charge.

New Developments:

In the June 2009 release of Absolute Value, clients will be able to take advantage of additional functionality in the areas of forecast roll-up; forecast adjustments; handling of excess and surplus stock; promotions; alerts; and graphical reporting.

User Range:

- 1 to 10
- 11 to 50
- 51 to 200
- 201 to 500
- Over 500
